

# Application Note

## K4u Cascading

### Overview

023

Amulet Hotkey's K4u KVM Switch can be cascaded to further K4u units to give a single user access to up to 16 computers. In Figure 1, connection to 7 computers is shown, in Figure 2 16 are shown.

**Figure 1.**

### Switching using MousePoint®

MousePoint® will not operate across all seven computers in Figure 1. However, it is possible to use MousePoint® across the first three computers in Set A, then manually change channels using keyboard hotkeys to the second set of four computers where MousePoint® will operate again.

**Each K4u must first be programmed with it's own configuration file using the Configuration Application accompanying MousePoint®.**

### Manual Switching

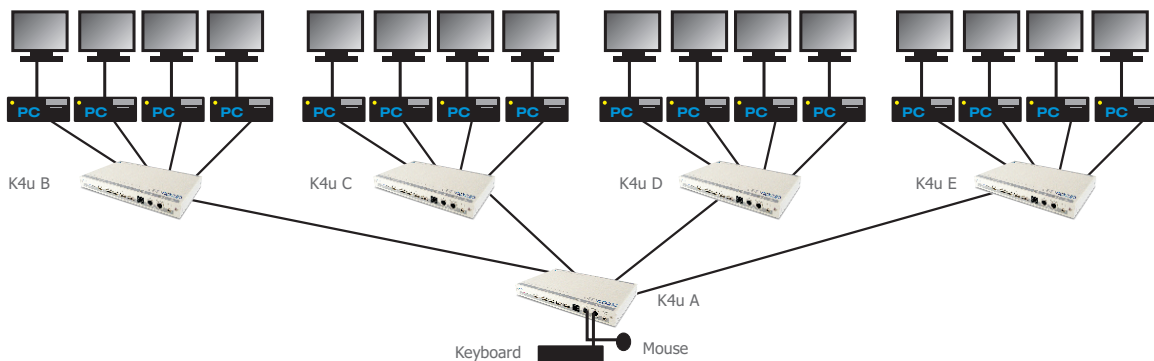

The most important point to remember when cascading more than one K4u is that K4u A is configured with different hotkeys to the other K4u(s). To configure these hotkeys, please refer to the DIP switch settings on the underside of the unit.

### Cascading with an AHK3000E Keyboard

It is possible to connect an Amulet Hotkey AHK3000E keyboard and use the keys PR1 - PR8 to change channel using a simple, single key press.

**Figure 2.**

**NOTE: DIP switch A3 (Mouse Channel Changing) must be switched off when using the K4u in cascade.**
